

Question Bank

Module:3

Functions & Arrays

1. Define Functions and needs of Functions
2. Explain Declaration of Function and general format of declaring function
3. Explain Return statement with example
4. Explain the parameter passing in function
5. Write a program to add two integers using functions
6. Explain Recursion function and its types
7. Design a program on Tower of Honai
8. Explain Array and its declaration
9. Explain Function Scope and its types
10. Differentiate between Recursion & Iteration
11. Explain the calculating address of array element
12. Explain storage class with Syntax and its types
13. Explain Auto storage class with examples
14. Explain Register storage class with examples
15. Explain Extern storage class with examples
16. Explain Static storage class with examples
17. Write a program to find exponents of a given no
18. Explain inserting elements on array with example
19. Explain the merging of two arrays with example
20. Explain searching of elements in an array with example program
