QUESTION BANK –II

PYTHON PROGRAMMING (module 2&3)

1. What is a Dictionary in Python? How is it different from List data type? Discuss the following Dictionary methods in Python with examples. (i) get() (ii) items() (iii) keys() (iv) values()
2. What is a List? Explain methods in List with one example.
3. Read N numbers from the console and create a list. Develop a program to print mean, variance and standard deviation with suitable messages.
4. Compare list and dictionary data structures with respect to python language. Explain in and not in operators in dictionary.
5. Develop a program to print 10 most frequently appearing words in a text file.[Hint: Use dictionary with distinct words and their frequency of occurrences. Sort the dictionary in the reverse order of frequency and display dictionary slice of first 10 items]
6. List out all the useful string methods which are supported in python. Explain with an example for each method.
7. Explain Python string handling methods with examples
8. Explain Password Locker Project.
9. What are the different steps in the project Adding Bullets to Wiki Markup.
10. Describe the difference between Python os and os.path modules. Also, discuss the following methods of os module a) chdir() b) rmdir() c) walk() d) listdir() e) getcwd()
11. What are the key properties of a file? Explain in detail the file reading/writing process with an example of a python program.
12. Illustrate with example opening of a file with open() function, reading the contents of the file with read() and writing to files with write().
13. List out the differences between Absolute path and Relative Path.
14. Explain the Escape Characters with Examples.
15. Define i. Multiline Strings with Triple quotes ii. Multiline Comments.
16. Discuss the different types of isX() Methods with an example.
17. Explain the different parts of a file path.

18. Explain different clipboard functions in python used in wiki markup.
19. Discuss different paths of file system.
20. Explain how to read specific lines from a file?. illustrate with python Program.
21. Explain with a programming example to each:(i) get() (ii) setdefault()
22. Develop suitable Python programs with nested lists to explain copy.copy() and copy.deepcopy() methods.
23. Explain reading and saving python program variables using shelve module with suitable Python program.
24. Explain Python string handling methods with examples:
join(),startswith(),rjust(),strip(),rstrip()
25. Explain with suitable Python program segments: (i) os.path.basename() (ii) os.path.join().
